# OpenCounter

ZoningCheck™

Give citizens a user-friendly, self-service zoning lookup and site selection tool without adding to your team's workload.

Simplify Site Selection

Take the jargon out of zoning. Using natural language and interactive zoning maps, OpenCounter makes it easy for anyone to quickly and easily understand where their project is allowed. No more guessing land use codes or calling City Hall to find the answer.

Free Up Staff Time

Empower anyone to find the zoning information they need on their own—without the need to involve staff. With fewer calls, emails, and in-person inquiries, your team is free to take on the critical projects shaping your city's future.

Give Users an Easy-to-Understand Path

Accessible from any of your city's websites, ZoningCheck™ simplifies complex regulations and geometry into an easy-to-read project summary that can be completed in just a few minutes. Users can feel confident they are starting their project with the correct information.

Full-Service Implementation

Hand off your data to our team and we'll handle the heavy lifting to move from kickoff to launch—typically in under two months.

Up-to-Date and Available 24/7/365

Give users an accurate, always current clearance for their use by incorporating ArcGIS data and planned developments.

Modern, User-Friendly Interface

Leave static, clunky software behind and give users a mobile-friendly experience designed to be easily understood by all.

Zoning Verification

Add a zoning verification letter so staff can provide official city approval.
